

flx EV and Zeroca Forge Pioneering Partnership to Launch South Africa's First E-Mobility Carbon Credit Aggregator Program

flx EV, a trailblazing force in electric vehicle (EV) innovation in South Africa, and Zeroca, a developer of carbon credits programs in the e-mobility space, proudly announce their groundbreaking collaboration to introduce the inaugural e-mobility carbon credit aggregator program in South Africa.

This innovative initiative marks a significant stride toward a greener future, as flx EV and Zeroca join forces to create a platform that encourages and rewards carbon emission reductions generated by the burgeoning South African EV industry.

In this first-of-its-kind program on the African continent, companies operating in the electric mobility sector (ranging from micro-mobility and last-mile delivery services to heavy-good transportation and the mining industry, as well as charge point operators) can monetise the emission reductions generated through their activities by joining the program, which is entirely free of charge for participants.

The collaboration aims to create a ripple effect across the industry, demonstrating that environmental stewardship and business success can go hand-in-hand. flx EV and Zeroca extend an open invitation to all companies within the South African EV sector to join this transformative movement.

Rudi Kriel, Transport Economist at flx EV, expressed enthusiasm about the collaboration, stating: "We are thrilled to join forces with Zeroca to accelerate the transformation of the minibus taxi industry in South Africa. This program will enable us to offer even more attractive solutions to minibus taxi operators, enabling them to realise significant savings in their operational costs while improving air quality in our South African cities. We invite our fellow industry players to join us in this collective effort to make a lasting impact."

Guillaume Remy, Director at Zeroca, echoed this sentiment, saying: "At Zeroca, we help companies leading the charge in the e-mobility transition get properly rewarded for the environmental services they deliver to the planet, and therefore to all of us. Our partnership with flx EV represents a shared commitment to sustainable transportation and the belief that the financial incentives offered by carbon credits can trigger a butterfly effect and significantly transform the way we move people and goods."

About flx EV

flx EV is dedicated to driving the transition to e-mobility in South Africa's minibus taxi industry by commercialising, renting, leasing and financing electric minibus taxis and developing a network of dedicated charging points for minibus taxi operators. We are rolling out our solution in Cape Town in 2024, starting with a number of key locations across the Mother City. Please visit www.flxev.com for more details on our activities and offering.

About Zeroca

Zeroca's mission is to accelerate the transition to e-mobility through carbon credit markets. We collaborate with transport operators, manufacturers of electric vehicles and equipment, project developers, charge point operators and financial institutions on projects or programs related to electric transport and mobility, including cars, buses, trucks, scooters, three-wheelers, logistics, mining and handling equipment for ports and airports, river and lagoon transport, charging networks, etc. Zeroca team members have developed the majority of active e-mobility projects under carbon credit standards to date, starting with the first CDM transport project under the Kyoto Protocol in the 1990s. We are now breaching new ground, developing the first aggregated carbon credit programs in e-mobility. Please visit www.zeroca.world for more details on our programs and track record.

Companies interested in participating in the e-mobility carbon credit aggregator program can reach out to Guillaume Remy at guillaume.remy@zeroca.world for more information.
