

**For Immediate Release**

**EcoKada joins Zeroca's e-mobility carbon credit program in Nigeria**

Lagos, Nigeria / Rotterdam, The Netherlands

02-09-2024

EcoKada will join Zeroca's carbon credit program dedicated to Nigerian e-mobility players. Open to all stakeholders in the value chain, the program aims to harness the potential of international carbon markets to promote the emergence of electric vehicles (EVs) of all shapes and sizes in Nigeria. In this case, adhesion to the Zeroca program will enable EcoKada to generate additional revenues from carbon credits from every kilometre driven with its fleet of two-wheelers for last-mile logistics.

Uchenna Njoku, Managing Director at EcoKada: "We have been running trial operations with the e-motorbikes of our OEM partner Bob Eco for some time and are now working on the deployment of a large-scale fleet in the Lagos metropolis. This will enable us to service our clients with a cheap and reliable solution for all their last-mile logistics needs with silent and emissions-free bikes. Joining the Zeroca program will allow us to keep offering attractive tariffs to our customers and improve our geographical coverage to service new urban areas across the country."

Guillaume Remy, Director at Zeroca: "We are delighted to see EcoKada join our upcoming Nigerian program. In every country where we operate, the last-mile logistics industry is typically among the first movers to adopt electric vehicles, and Nigeria will be no exception. The program is designed to reward front-runners like EcoKada and provide them with additional means to achieve their vision. We are honoured to support their growth through our program and thus bring our modest contribution to the emergence of the Nigerian e-mobility ecosystem."

## About EcoKada

EcoKada is a wholly Nigerian company that is poised to leverage advances made in the technology of energy transition to create a robust eco-friendly market in the Nigerian logistics industry. Our operation model is focused on meeting our numerous clients' needs with our zero-emission based motorcycles. EcoKada and Bob Eco, an OEM of electric motorcycles, are collaborating towards realising these laudable objectives that would keep our climate safer, while creating eco-friendly jobs for the Nigerian teeming youths.

## About Zeroca

Zeroca's mission is to accelerate the transition to e-mobility through carbon credit markets. We collaborate with transport operators, manufacturers of electric vehicles and equipment, project developers, charge point operators and financial institutions on projects or programs related to electric transport and mobility, including cars, buses, trucks, scooters, three-wheelers, logistics, mining and handling equipment for ports and airports, river and lagoon transport, charging networks, etc. Zeroca team members have developed the majority of active e-mobility projects under carbon credit standards to date, starting with the first CDM transport project under the Kyoto Protocol in the 1990s. We are now breaching new ground, developing the first aggregated carbon credit programs in e-mobility. Please visit [www.zeroca.world](http://www.zeroca.world) for more details on our programs and track record.

Companies interested in participating in Zeroca's dedicated program for Nigerian e-mobility players can reach out to Guillaume Remy at [guillaume.remy@zeroca.world](mailto:guillaume.remy@zeroca.world) for more information.
